3	Tutorial: Compiling concurrent languages for sequential processors	94%
	Stephen A. Edwards ACM Transactions on Design Automation of Electronic Systems (TODAES) April 2003 Volume 8 Issue 2	
Embedded systems often include a traditional processor capable of executing sequential code, but both control and data-dominated tasks are often more naturally expressed using one of the many domain-specific concurrent specification languages. This article surveys a variety of techniques for translating these concurrent specifications into sequential code. The techniques address compiling a wide variety of languages, ranging from dataflow to Petri nets. Each uses a different method, to some degr ...		
4	Survey of software tools for evaluating reliability, availability, and serviceability	94%
